

“Saving lives, caring for hearts”

FOCUS AREAS

Disease prevention and treatment

Localitation

Valencia. Edo. Carabobo **Venezuela**

Global Grant application number 2240079

The objective: to reduce the morbidity and mortality rate in low-income patients in the city of Valencia, mainly with heart disease, by carrying out specialized medical diagnoses, through diagnostic ultrasounds and electrocardiograms, together with the implementation of a regenerative medicine program

This requires the acquisition of a **Doppler Ultrasound Equipment with four transducer**, and a **three channel Electrocardiogram Equipment**, which allow progress from the consultation stage to the specialized diagnosis and subsequent treatment of diseases

Who will benefit from this global grant?

The population of the city of Valencia is 1,373,193 inhabitants and the town of La Candelaria has approximately 45,000 inhabitants. 79% of this population is in a situation of extreme poverty, it means that they are outside the private health system and must be cared for by the public health system, which is collapsed and inefficient

Since March 2023, the volunteer medical staff of the Rotary Club of Valencia has been carrying out a project in the Central Neighborhood, which has treated almost 2,000 patients

With the acquisition of diagnostic equipment, we hope to treat 4,200 patients during the first year.

What community needs will your project address?

The areas that can be covered with the acquisition of diagnostic medical ultrasound equipment are:

- Cardiac ultrasound
- Abdominal and urological ultrasound
- Breast ultrasound
- Muscle or tendon ultrasound
- Cervical and thyroid ultrasound
- Transrectal ultrasound
- Transvaginal ultrasound

What community needs will your project address?

With the electrocardiogram (ECG) equipment, the following cardiac pathologies can be detected:

- Arrhythmias
- Heart disease
- Coronary artery disease
- Heart failure
- Heart valve disease
- Congenital heart defects

who will take care of the project once the grant resources are exhausted?

- ✓ Asociación Civil Centro Médico de Cardiología Valencia
- ✓ Help Your Neighbor Foundation

✓ Bringing one person back to life and helping hundreds of people avoid heart disease is ensuring the project lives on, even when grant funds have run out.
