

HELP THOUSANDS OF YOUNG CHILDREN, TEACHERS AND STUDENTS BY COOPERATING WITH OUR PROJECT TO BRIDGE THE DIGITAL GAP:

Digital Interactive Classrooms

The Digital Interactive Classrooms Program will provide access to technology and digital devices to schools in the public education system in Panama. This program will benefit 3000 school age children per year and 300 in-service and pre-service teachers. The program proposes four interventions:

- Establish digital interactive classrooms (both mobile and fixed-location) in 8 of 10 provinces in Panama, leveraging the presence of Rotary clubs in each province.
- Train teachers and students teachers (teachers to be) in digital competencies for a motive learning environment in the classroom
- Provide a model for mainstream digitalization in the nation's education system, including training teachers and a system for equipment maintenance and replacement.
- Develop a center to provide continued training in digital competencies for teachers and students and be a repository of digital educational material for teachers to use.

This program will establish fixed-location digital interactive classrooms at 24 schools and provide Remote Area Community Hotspot for Education and Learning (RACHEL) devices to 72 mobile technology classrooms.
